

SMB Smart Solutions™

Helping Small and Medium-sized businesses with Security, Productivity and Cost concerns.

Security

Problem

A medium-sized business had major security concerns. Four or five unauthorized people entered the premises each day. Data had no security at all. Their web site was completely open to attack. Laptops, which contained sensitive data, were not protected and they were used outside the office. USB memory sticks were freely able to copy data from the network and the laptops. Everything was open to everyone. Nothing was protected.

Solution

ACS evaluated current versions of Cisco Pix Firewall OS, Single Domain Login and VPN Access Security. Sonic Firewall Secure VPN Client for VPN Access was installed. Multiple levels of administrative security access were created, as well as local and domain-based passwords. ACS wrote a Password Policy and management enforced it.

Results

ACS evaluated current versions of Cisco Pix Firewall OS, Single Domain Login and VPN Access Security. Sonic Firewall Secure VPN Client for VPN Access was installed. Multiple levels of administrative security access were created, as well as local and domain-based passwords. ACS wrote a Password Policy and management enforced it.
