Helping Small and Medium-sized businesses with Security, Productivity and Cost concerns.

Video Conferencing

Problem

A medium-sized company struggled with video conferencing. Their current system had poor video quality, limited camera angles, latency between voice and video, the lack of ability to conference in more than two locations at a time and the setup time was too long.

Solution

ACS researched video conferencing options, including Polycom and Cisco. We selected Polycom's IP-based solution, with high quality, versatile video conferencing for medium to large rooms. It is ideal for medium to large rooms of up to 40 people and offers incredibly natural imaging using the latest in video technology and standards. Embedded speaker and subwoofer add superior audio performance. The system allows our customer to easily share presentations, movie files, audio clips and pictures.

Results

Video Conferencing is in. Our customer never knew they needed video so much. Now they spend more time on video calls and less time on planes and in hotels.
